

Laminate Cleaning Instructions

Our laminates are designed to be durable and low maintenance. They are also heat, moisture, stain and abrasion resistant, though different finishes and materials have varying degrees of durability. In general, High Pressure Laminates (HPL) are more durable than Thermally Fused Laminates/Melamine (TFL) due to the addition of layers of thermally fused kraft paper.

Routine Care

Use a damp towel or sponge with warm water and mild soap. Wipe dry.

Stubborn Stains

Non-abrasive household cleaners like Windex®, Glass Plus®, or Formula 409® may be used.

Caution

Abrasive and acidic products, heat, and moisture can damage laminate surfaces.
